25X1

Dear

25X1

I have just received an extremely interesting suggestion from [] This is to establish at [] a common set of calibration standards. I am not sure we will want to undertake complete standardization but do feel that it is worthwhile investigating the extent to which economy in equipment and utilization can be obtained. This suggestion is not intended to infringe on the various unique sets of check-out and ground handling equipment but would be a central calibration standard to maintain such equipment at appropriate levels of accuracy.

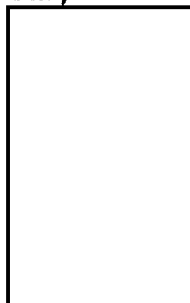

25X1

If possible, I would appreciate having from each addressee by 20 March your reaction to the use of a central calibration set-up for the use of all concerned. I should also like to have your various requirements for calibration standards which will be needed by the various equipments you plan to have at [] By this is meant the calibration accuracy desired and the calibration interval in elapsed time or operating hours for each function.

Sincerely,

E.P.K.
